

Welcome to the next step for Cyber: Accountability

By Jeffrey Lush

Welcome to the next step for Cyber: *Accountability*

What makes BAP unique in an industry flooded with cybersecurity solutions? Simple- BAP is Accountable Security, developed with the end state in mind, a

System Based Cyber Strategy

BAP leverages existing cyber, augmenting the tools and information collected to bridge the gap between real-time threat detection and an organization's cyber standards, policy, and compliance.

It's as easy as BAP.

Quick start with bapReader and move into building your Cyber Standards and Policy. It's as easy as **BAP**.

Understand security requirements with bapReader.

bapReader

Let's take the security requirements (bapReader) and create security standards

bapControl

Now that we have multiple standards, we can begin to group the standards into cyber policy

bapBaseline

Not ready to build the standards... no problem. Check out the bapMarketplace.

bapMarketplace

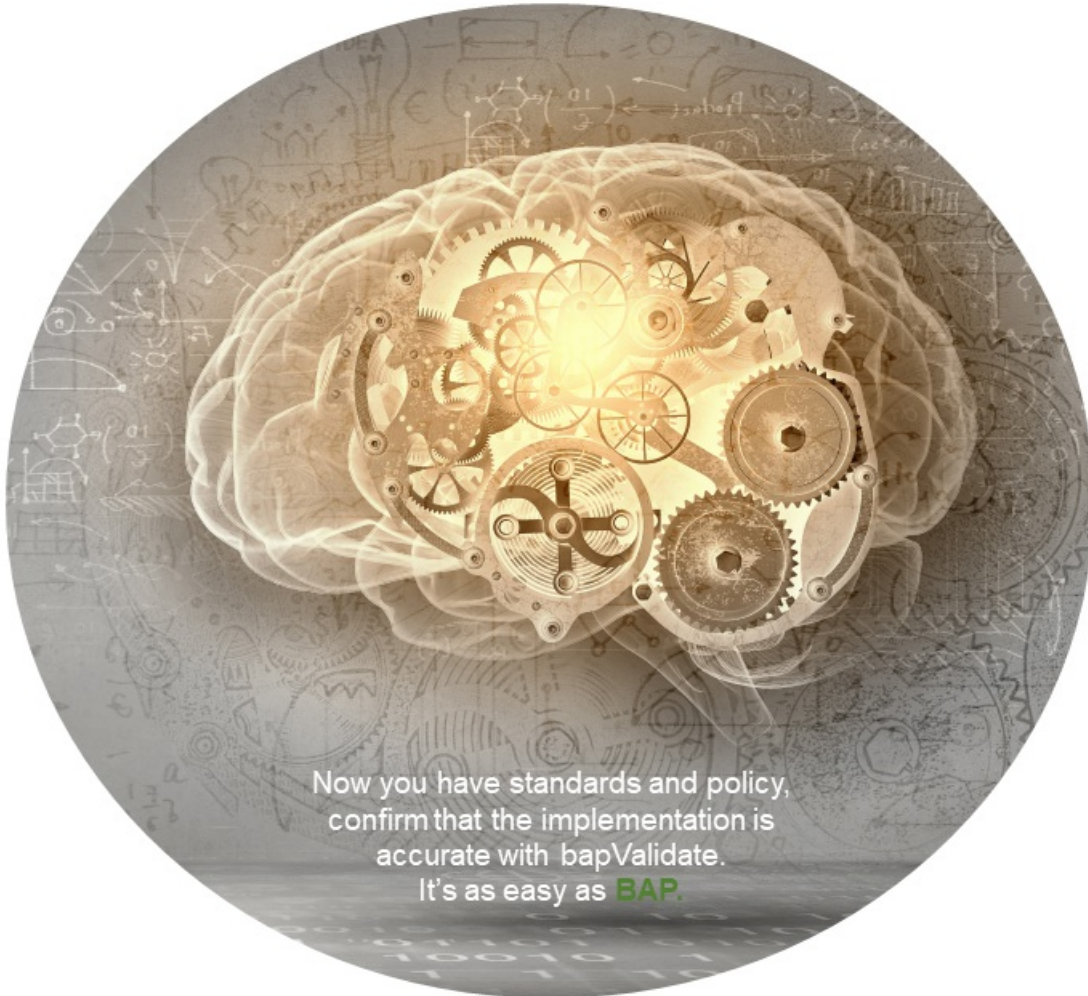

bapInterview

Create custom compliance collection interviews to ensure your standards are implemented throughout the organization.

bapValidate

Validate language used to answer compliance and other interviews providing insight for the enterprise.

Now you have standards and policy,
confirm that the implementation is
accurate with bapValidate.
It's as easy as **BAP**.

bapAI

You have discovered your requirements with **bapReader**, validated compliance with **bapValidate** and now you are prepared for complete System based Security aligning real-time threat with your standards and policy – **BAP build . analyze . protect**

System based Security | Accountability
It is time for **BAP**.
